Sustainable Feeding Bottles

World Aquatics is currently exploring sustainable alternatives for water bottles to be used during our open water competitions. Specifically, we are looking for solutions that meet the following criteria:

- (i) Reduced carbon footprint (preferably aluminum, carton, PLA), ideally recycled and/or recyclable
- (ii) Floatable in water even when full
- (iii) Available in quantities of minimum 4,000 per year
- (iv) Easy to open and drink quickly during competition, ideal is 3.5cm wide drinkable area
- (v) Shape allowing athletes to squeeze and throw back easily to a boat for example. Not too big, standard size is ideal (allowing for 33cl)
